AI Lead-to-Booking Automation

Complex Multi-Stage Workflow — Med Spa / Healthcare Practice

Prepared as an AI Automation Agency (AAA) reference workflow

This document outlines a full lead-capture, qualification, booking, and retention automation system — including the continuous reporting layer that gives the business owner visibility without manual tracking.

Workflow Overview

This system automates the entire client journey — from first contact to long-term retention — using conditional logic (branching) so different lead types are handled differently, without manual intervention from staff.

1. Capture

Leads enter through ad forms, website chat, or missed calls. All sources feed into one CRM via webhook.

2. AI Qualification

An AI agent texts the lead within 60 seconds, asks 2-3 qualifying questions, and scores the lead as Hot, Warm, or Cold.

3. Branching Logic

Hot leads are booked immediately. Warm leads enter a 5-day nurture sequence. Cold leads go into a slower 90-day re-engagement cycle.

4. Pre-Appointment

Automated reminders (24hr, 2hr), digital intake forms, and no-show risk flagging that creates a manual call task for staff.

5. Post-Appointment

Review requests, automatic follow-up appointment scheduling, and long-term retention re-engagement if the client doesn't rebook.

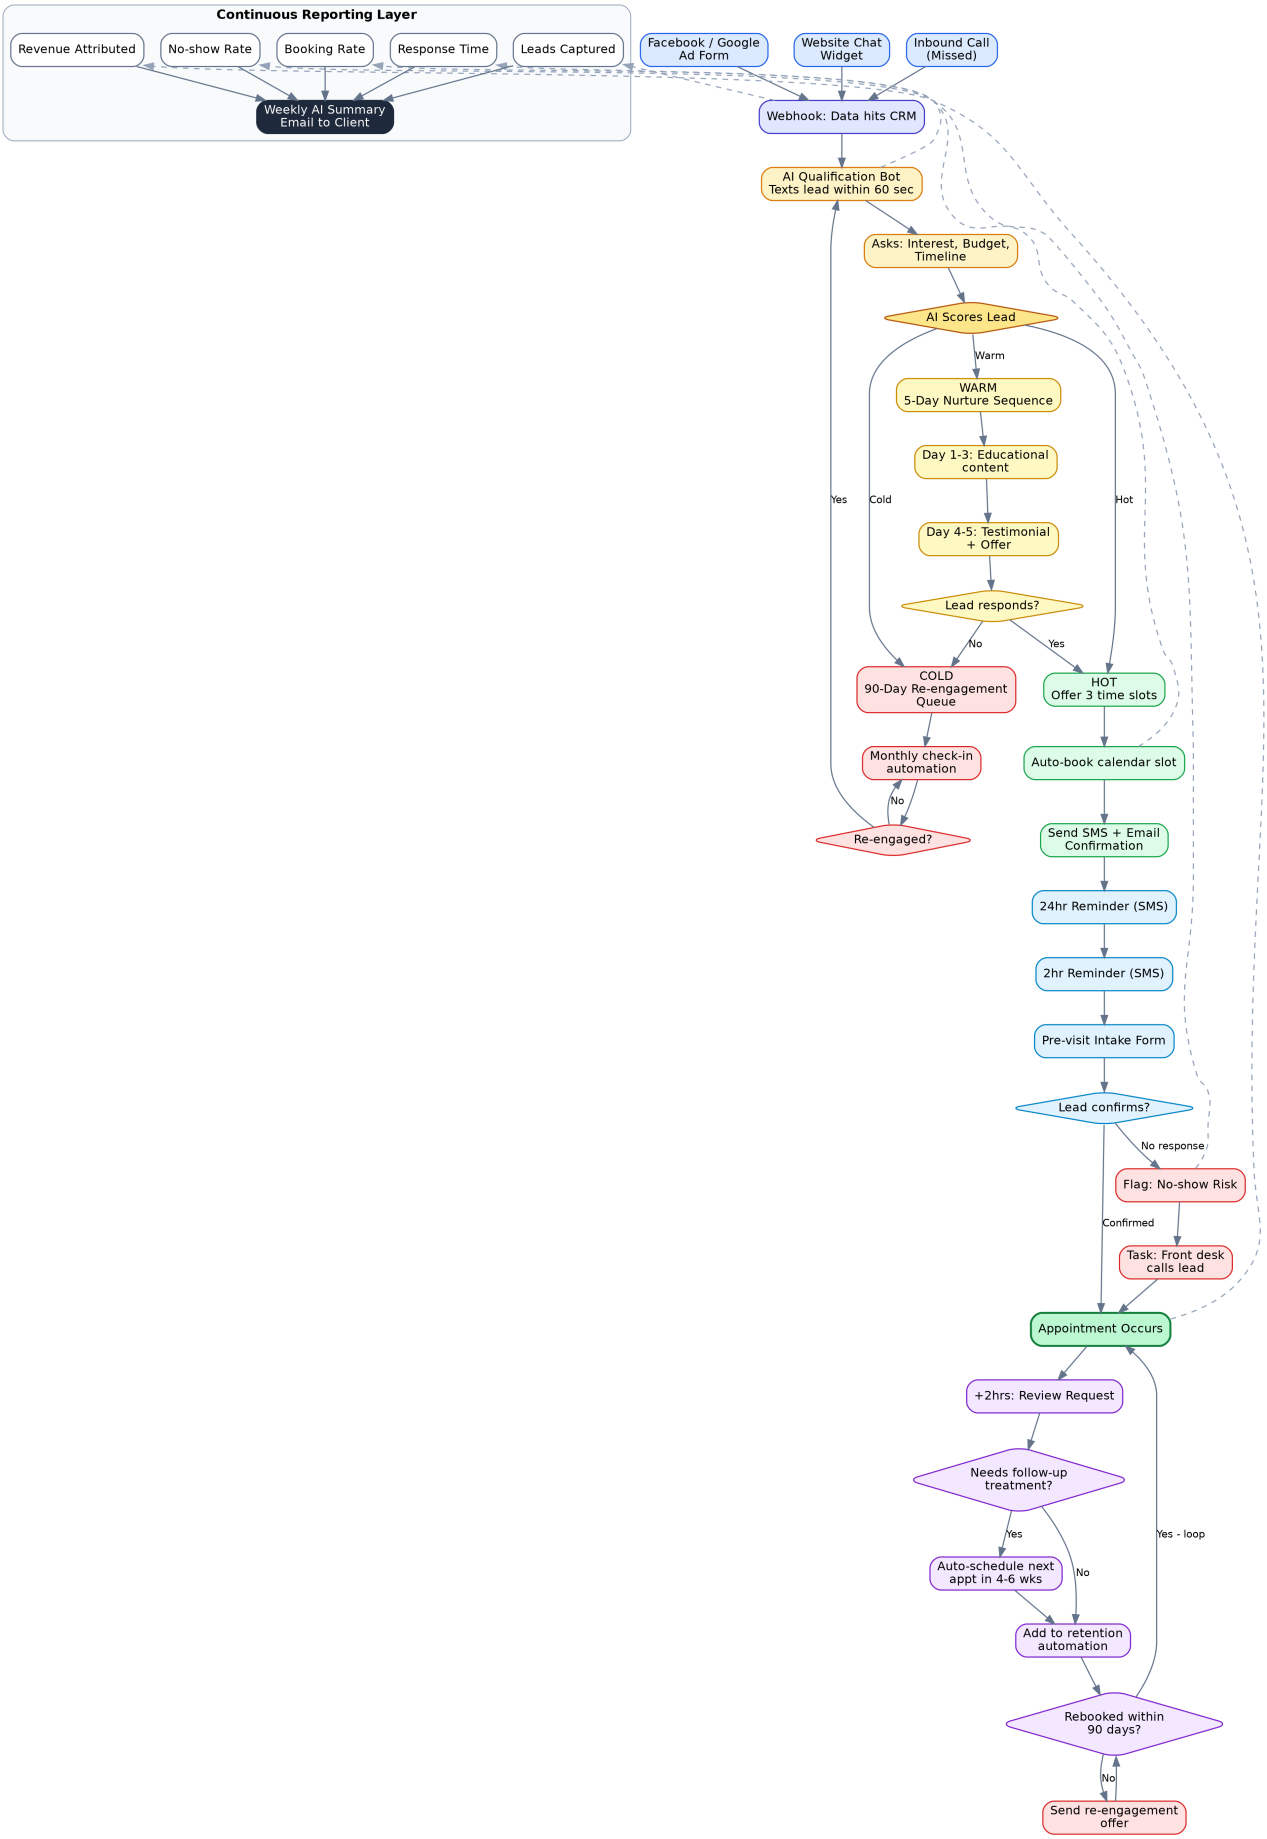

6. Reporting Layer

Every stage feeds a live dashboard tracking leads, response time, booking rate, no-shows, and revenue — summarized in a weekly AI-generated email.

Tools Typically Used

Layer	Tools
Ad / Lead Sources	Meta Ads, Google Ads, website chat widget
Orchestration	GoHighLevel or Make.com
AI Conversation	OpenAI / Anthropic API
Messaging	Twilio (SMS), SendGrid (Email)
Scheduling	GHL Calendar / Calendly
Reporting	Airtable or native CRM dashboard
